# Saif Eddine Ben Achour

## Full Stack Developer · Tech Lead

Tunis, Tunisia · saifeddine.benachour@gmail.com · +216 50 989 000 · linkedin.com/in/saif-eddine-ben-achour

### PROFILE

Full stack developer and tech lead with 8 years of C# / .NET experience, including seven years leading the technology of a platform used in production by more than 2,400 people. I work across Angular, React, .NET and Unity, and enjoy both writing and reviewing code and framing work, splitting tasks and helping a team grow.

### SKILLS

| | |
|---|---|
| **Front end** | Angular, React, TypeScript / JavaScript |
| **Back end** | C# / .NET (async/await, multithreading, profiling), REST APIs, Node.js, PostgreSQL |
| **Unity & mobile** | Unity (C#), WebGL, Android (Java), Socket.IO |
| **Technical leadership** | Code review, mentoring, technical documentation, planning and delivery tracking (ClickUp, JIRA), Agile |
| **Quality & delivery** | Debugging, Git / GitHub, CI/CD, Docker (Jitsi, ERP), production supervision |

### EXPERIENCE

**Freelance consultant & developer** — Jan 2026 – present
Tunis

- Management tool and Value Stream Mapping dashboard for a bank (confidential client) — React and .NET Core.
- Retail Flow (May – Jun 2026): industrial retail management prototype designed and built alone in six weeks — .NET Core, React, PostgreSQL.
- Adeeb (Aug 2026): illustrated children's story editor with story sharing, for an Omani start-up — Unity (C#) and Firebase.

**Tech lead & co-founder — SgharToon** — Oct 2017 – Dec 2025
Tunis

- Online pre-diagnosis and therapy platform for children with learning disorders: Unity mobile app, therapist web tool and parent web app.
- Led a team of developers: task distribution, code reviews, mentoring. About ten people joined over the years.
- Technical direction since the start and a data-driven architecture: 170+ modules driven by remote JSON content, with no module-specific code.
- Server-authoritative networking with state-snapshot recovery; memory pipeline holding 60 fps on low-end Android.
- Real-time Angular supervision dashboard for therapists, designed and integrated with the developer of that part.
- Asynchronous REST service layer with retry, timeout and fallback: 99.7% measured availability in production.
- Platform CI/CD. Docker on several projects, including Jitsi and an ERP installation.

**Trainer & head of training — WeCode Land** — 2022 – 2023

- Eight-week intensive Unity 2D programme for junior profiles, delivered with a working prototype.

**Lecturer & project supervisor — ISAMM, University of Manouba** — 2022 – 2024

- C#, Java, native Android and software architecture. About twenty students supervised (engineering and bachelor final-year projects, summer internships).

**C# developer — Badiya (interactive WebGL application)** — 2022 – 2023

- Configurable simulation engine, 60 fps on mid-range browsers, C#–JavaScript bridge to the web layer.

**Unity developer — virtual visit for a digital fair** — 2022 · 4 months

- Sole Unity developer in a team of three with a 3D designer and a web developer.

**Developer — industrial quality-control solution** — 2019 – 2022
Deployed at the client

- 3D visualization: CAD (STP) model loading, full camera navigation and geometric annotations linked to business indicators.

### EDUCATION

Engineering degree (Bac+5) — Digital Imaging & Virtual Reality — 2015 – 2018

Bachelor's in Multimedia Computer Science — ISAMM, University of Manouba 2012 – 2015
